

Application to browse movies and add new movies to DB by using MVC.

Mapped all the controllers by using `SimpleUrlHandlerMapping`,

`ControllerClassNameHandlerMapping` and

`BeanNameUrlHandlerMapping` method.

Welcome to our Movie Store

Please make your selection below

☒ Browse Movies

submit

Add new movie to Database

Using `SimpleFormController` and `Hibernate`. Searching Movies to be done by Movie ID as the `Hibernate Session` objects's `get` method requires `Serializable ID` (which is basically the PK in the DB, but `SerializableID` in Java).

`SessionFactory` from the `Configuration` instance.

Searching by Movies table id

Input id:
